

## The Library SysLibProjectInfo.lib

---

If the target system supports the functionality, then the function contained in this library can be used to read the Project Info (CoDeSys Menu 'Project' 'Project Info'). The execution is synchronous.

### The function ProjectInfo

This function of type BOOL provides the components of the project info which was entered in the programming system ('Project' 'Project Info'); the structure PROJECT\_INFO is used for that purpose.

TRUE is returned if the operation has been successful, otherwise FALSE.

| Input Variable | Data type               | Description  |
|----------------|-------------------------|--|
| ProjectInfo    | POINTER TO PROJECT_INFO | Pointer on the project information which is stored in the structure PROJECT_INFO. The ADR operator can be used to retrieve the offset) |

### Structure PROJECT\_INFO

The components of this structure contain the Project Information which was entered in CoDeSys ('Project' 'Project Info'). It is used by the function ProjectInfo.

| Component     | Data type   | corresponding field in dialog 'Project Info' in CoDeSys |
|---------------|-------------|---|
| dtDate        | DT          | 'Change date:'  |
| stProject     | STRING(255) | 'File:'   |
| stTitle       | STRING(255) | 'Title:'  |
| stVersion     | STRING(255) | 'Version:'  |
| stAuthor      | STRING(255) | 'Author'  |
| stDescription | STRING(255) | 'Description:'  |
